

V&F Transformer and The Harrington Group strike a deal to computerize V&F Transformer's ISO Compliant Quality Management System!

In a move, consistent with V&F Transformer's dedication to quality assurance, V&F Transformer has purchase the Harrington Group Quality Management System and implementation will begin immediately.

This internet based computer program will allow V&F to maintain, track, and efficiently revise computerized versions of all production critical and control sensitive documents, track crucial corrective and preventative actions, as well as manage equipment maintenance, calibration activities, and facilitate a wide spread and requirement directed training program. The HQMS system is internet based and will be implemented at all V&F Transformer Facilities.

V&F's Dean Foderaro Jr. and Larry NeJame of the Harrington Group have been developing this agreement over the past several months, and the entire V&F Team is very excited and positive they have chosen the right product. Dean Foderaro Jr. will be overseeing the implementation and will be spending time at the Harrington Group Facility during the month of August for training and to develop a proper implementation program.

Visit the Harrington Group Web Site and learn more about the HQMS system by clicking on the link below: <http://www.harrington-group.com/>
